

IN THE CLAIMS:

Please cancel Claims 1 to 10, 13 and 14 without prejudice or disclaimer of subject matter, amend Claims 11, 12 and 15, and add new Claim 16 as shown below. The claims, as pending in the subject application, now read as follows:

1. to 10. (Canceled)

11. (Currently amended) A print service system comprising:

an acquiring unit adapted to acquire a designated type of print devices for printing a content;

a first judging unit adapted to judge whether or not the [[a]] content is to be printed in [[is]] color [[data]]; and

a print control unit adapted ~~to control~~ to print the content using a plurality of print devices having the designated type when said first judging unit judges that the content is not to be printed in color, but to print the content using one print device selected from among the [[of a]] plurality of print devices having the designated type when said first judging unit ~~judges~~ judge that the content is to be printed in color.

12. (Currently amended) The system according to claim 11, further comprising a second judging unit adapted to judge whether or not a print order is a reorder, wherein, when said second judging unit judges that the print order is a reorder, said acquiring unit acquires information identifying a print device used at a previous print order and said print control unit

controls ~~to print~~ the content using the ~~[[same]]~~ print device identified by the acquired information as used at a previous print order when a result of judging is reorder.

13. and 14. (Canceled)

15. (Currently amended) A print service method comprising the steps of:

acquiring a designated type of print devices for printing a content;

judging whether or not a content is to be printed in ~~[[is]]~~ color ~~data~~; and

controlling ~~to print~~ the content using a plurality of print devices having the designated type when it is judged in said judging step that the content is not to be printed in color but is to be printed using one print device selected from among the device of a plurality of print devices having the designated type when it the content is judged in said judging step that the content is to be printed in color.

16. (New) The system according to claim 11, wherein said print control unit, when said first judging unit judges that the content is not to be printed in color, controls to print the content by assigning a print job for a respective page or a respective copy of the content to each of the plurality of print devices having the designated type.
